Your advantages at a glance

- Condition monitoring & gateway in one device**
 Saves space and costs thanks to compact multifunctionality
- Intuitive web interface (HTML5) – barrier-free & future-proof**
 Easy operator control without additional software – can also be used on the move
- Integration of all Bender devices & compatible third-party systems**
 High flexibility for manufacturer-independent system expansions
- Support of common protocols: Modbus TCP/RTU, SNMP, MQTT**
 Seamless integration into automation, building and IT systems
- Two isolated Ethernet ports for structured network connection**
 Centralised data communication reduces IT effort and simplifies servicing
- Visualisation & parameter setting directly in the browser**
 Quick overview, easy configuration – without additional tools
 Freely customisable for individual requirements
- Digital inputs & outputs for flexible alarming**
 Individual reactions - can be controlled locally or via the network
- Remote access & remote diagnostics via LAN, WAN or Internet**
 Efficient, location-independent servicing and fault analysis
- Fast putting into service & simple system diagnostics**
 Save time and costs during installation and operation
