## 绝缘监视仪

ZH

### 使用目的

ISOMETER® isoMED427P-CX 监视医疗 IT 系统中的绝缘电阻  $R_f$ ，其范围为 AC 70…264 V。此外，还监视 IT 系统变压器的负载电流和温度。一旦检测到绝缘故障，内置定位电流发射器能够及时定位到绝缘故障。

报警和测量值通过 BMS 接口传送给其他总线设备。

对于报警和状态显示，建议使用特殊的报警显示和测试单元。对于绝缘故障定位，推荐使用 EDS 系列设备。推荐使用 page 11 上列表上的设备组合。

isoMED427P-CX 不需要独立的电源。最大允许系统泄漏电容  $C_e$  是 5  $\mu\text{F}$ 。

### 通用安全信息

除了这份技术参数外，设备的文件还包含一张题为“本德尔产品的重要安全说明”的表格。

### 设备特殊安全信息

提醒

#### 由于安装不专业而造成财产损坏的风险！

如果有超过一台绝缘监视仪连接到带电系统中，那系统可到会损坏。如果连接数个设备，那设备不能实现功能并且不会发出绝缘故障信号。确保在每个带电系统中，仅连接一台绝缘监视仪。

提醒

#### 确保与 IT 系统断开！

当执行绝缘或电压测试时，在测试阶段设备必须与系统隔离。否则设备可能会损坏。

### 功能

在普通操作时，显示屏显示当前测量的绝缘电阻值。向上和向下按钮用于选择显示当前测量的负载电流的百分比。如果绝缘电阻下降且低于响应值时，LED AL1 会发出绝缘故障信号。当负载电流过高时，LED AL2 会点亮；当超出被监视的 IT 系统的变压器温度时，报警继电器 K1 会发出全部报警类型的信号。此外，通过端子 A 提供总线信号，端子 B 用于绝缘故障定位和报警显示和指示单元。

一旦检测到绝缘故障，内置的故障定位电流发射器立刻进行绝缘故障定位，前提是在菜单中已经打开 EDS 功能（工厂设置 = off）。在 2 秒的交替时间内，注入正、负定位电流脉冲到被监视的 IT 系统中，其间有 4 秒的无脉冲暂停时间。

## Insulation monitoring device

### Intended use

The ISOMETER® isoMED427P monitors the insulation resistance  $R_f$  in medical IT systems of AC 70…264 V. In addition, the IT system transformer's load current and temperature are monitored. Once an insulation fault is detected, the internal locating current injector allows insulation faults to be localised.

Alarms and measured values are made available to other bus devices via the BMS interface.

For alarm and status indication the use of special alarm indicator and test combinations is recommended. For insulation fault localisation appropriate devices of the EDS series are recommended to be used. Recommended device combinations are listed in the table on page 11.

isoMED427P does not require separate supply voltage. The maximum permissible system leakage capacitance  $C_e$  is 5  $\mu\text{F}$ .

### General safety information

In addition to this data sheet, the documentation of the device includes a sheet entitled "Important safety instructions for Bender products".

### Device-specific safety information

CAUTION

#### Risk of property damage due to unprofessional installation!

If more than one insulation monitoring device is connected to a conductively connected system, the system can be damaged. If several devices are connected, the device does not function and does not signal insulation faults. Make sure that only one insulation monitoring device is connected in each conductively connected system.

CAUTION

#### Ensure disconnection from the IT system!

When insulation or voltage tests are to be carried out, the device shall be isolated from the system for the test period. Otherwise the device may be damaged.

### Function

In normal operation, the display indicates the currently measured insulation resistance value. The Up and Down buttons are used to select the display indication of the currently measured load current in percentages. If the insulation resistance falls below the response value, LED AL1 will signal an insulation fault. LED AL2 lights when the load current is too high and when the temperature of the monitored IT system transformer is exceeded, alarm relay K1 signals all types of alarms. In addition, a bus signal is provided across the terminals A, B for insulation fault locators and alarm indicator and test combinations.

Once an insulation fault is detected, the internal locating current injector is activated for insulation fault location, provided that the EDS function has been switched on in the menu before (factory setting = off). For a duration of 2 seconds alternately a positive and negative locating current pulse is injected to the IT system being monitored with a no-pulse pause of 4 s in between.

isoMED427P-CX 只能作为 BMS 从属工作。这就是为什么报警指示器或者绝缘故障定位仪作为主机。BMS 地址 1 必须被分配为 BMS 主机。

#### 自动自检

在连接到电源电压和之后的两个小时，设备会自动执行自检。在自检过程中，可以确定内部功能故障或连接故障，并以错误代码的形式显示在显示屏上。在测试过程中，报警继电器不会切换。

#### 手动自检

按下内置或外部测试按钮并且持续超过 2 秒，设备会执行自检。在测试过程中，可以确定内部功能故障或连接故障，并以错误代码的形式显示在显示屏上。在测试过程中，报警继电器会动作。

当按下测试按钮 “T” 时，设备显示所有可用的元件。

#### 功能性故障

如果发生故障，继电器 K1(11, 12, 14) 和所有三个 LED 闪烁。故障代码出现在显示屏上。

E01 = PE 连接故障，在 E 和 KE 之前没有低电阻连接。

E03 = 测量电流互感器中断

E04 = 短路测量电流互感器

E05...Exx = 内部设备错误，联系本德尔服务中心

#### 密码保护

如果已经启用密码保护 (on)，只有在输入正确密码的情况下才能设置 (0...999)。

#### 出厂设置 FAC

在启动出厂设置之后，之前更改的所有设置都会重置为运输状态。

#### 监视 IT 系统变压器

设备通过评估 PTC 的电阻值来监视温度。当达到  $4 \text{ k}\Omega$  的响应值时，激活报警显示超温，显示超过  $> \text{ }^{\circ}\text{C}$ 。不显示温度值。

为了避免变压器过载，负载电流监视需要与温度监视结合。  
更详细的内容请参考接线图！

#### 安装和连接

##### 电击造成致命伤害的危险！

接触系统的带电部件会产生电击的危险。在安装外壳和设备连接工作之前，请确保电源已断开，系统已断电。遵守现场工作的安装规则。

- isoMED427P-CX 符合标准 IEC 60715 的 DIN 导轨安装或下面描述的螺丝安装。

The isoMED427P can only be operated as BMS slave. That is why the alarm indicator or the insulation fault locator operates as the Master. BMS address 1 must always be assigned to the BMS master.

#### Automatic self test

The device automatically carries out a self test after connecting to the supply voltage and later every hour. During the self test internal functional faults or connection faults will be determined and will appear in form of an error code on the display. The alarm relay is not switched over during this test.

#### Manual self test

After pressing the internal or the external test button for > 2 s, the device carries out a self test. During this test, internal functional faults, or connection faults will be determined and will appear in form of an error code on the display. The alarm relay will be switched during this test.

Whilst the test button "T" is pressed, all display elements available for this device are shown.

#### Functional faults

In case of a malfunction, the relay K1 (11, 12, 14) and all of the three LEDs flash. An error code appears on the display.

E01 = PE connection fault, no low-resistance connection between E and KE.

E03 = Measuring current transformer interruption

E04 = Short-circuit measuring current transformer

E05...Exx = Internal device error, contact the Bender service.

#### Password protection

If password protection has been activated (on), settings can only be made subject to the correct password being entered (0...999).

#### Factory setting FAC

After activating the factory setting, all settings previously changed are reset to delivery status.

#### Monitoring the IT system transformer

The device monitors the temperature by evaluating the resistance value of a PTC. When a response value of  $4 \text{ k}\Omega$  is reached, an alarm will be activated indicating overtemperature, the display shows  $> \text{ }^{\circ}\text{C}$ . Temperature values will not be indicated.

CAUTION

*In order to avoid transformer overload, load current monitoring should be combined with temperature monitoring.*

*For details refer to the wiring diagram!*

#### Installation and connection

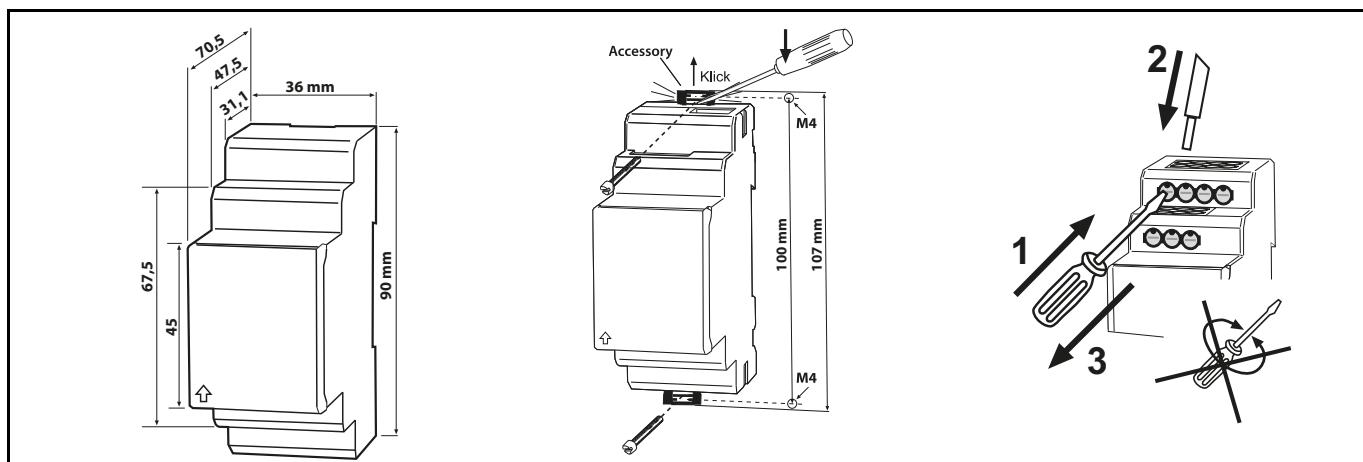

DANGER

##### Risk of fatal injury from electric shock!

*Touching live parts of the system carries the risk of electric shock. Before fitting the enclosure and working on the device connections, make sure that the power supply has been disconnected and the system is dead. Observe the installation rules for live working.*

- The isoMED427P is suitable for DIN rail mounting acc. to IEC 60715 or for screw mounting, as described below.
