

CD25000

Coupling device

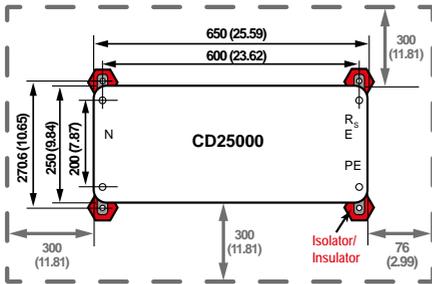

Intended use

The CD25000 can be used with an NGR monitor in HRG systems with a system voltage up to $U_{LL} = 25 \text{ kV}$ ($U_{NGR} = 14.5 \text{ kV}$). The maximum operating altitude is 5000 m above mean sea level.

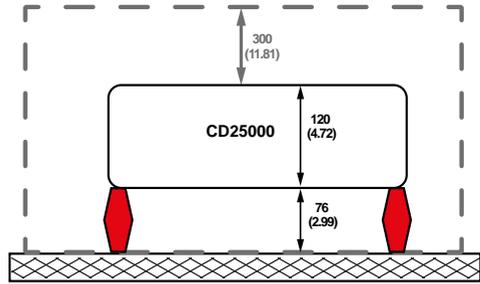

Functional description

The combination of an NGR monitor and a coupling device extends the range of application of the neutral grounding resistor monitor up to a system voltage of 25 kV. The duty time is limited to 10 s (minute), the cool-down period is 120 minutes.

Dimension diagram and installation

Dimension diagram; all dimensions in mm (in)
Tightening torque, cover screws: 2.5 Nm (22.1 lb-in)
Minimum distance to neighboring devices \longleftrightarrow

! DANGER of an electric shock!
Inappropriate installation and connection can result in death, serious physical injury or substantial damage to property.

The device is suitable for screw mounting:

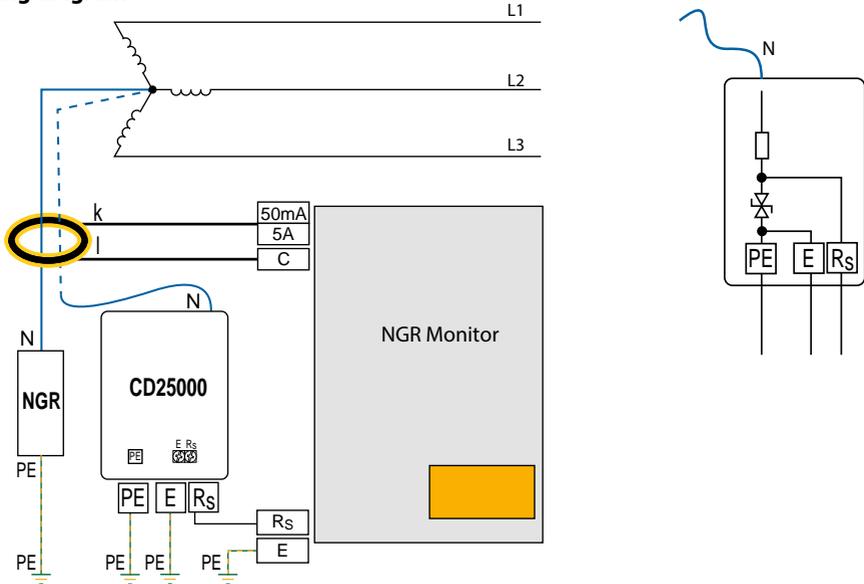

Four M8 fastening screws, tightening torque 21 Nm (186 lb-in).

Connection

Unscrew the cover, connect suitable cable to the appropriate socket.

i The increased protection IP54 is achieved by feeding the cable through a membrane. To do this, push the cable through the membrane during installation and connect it. The membrane wraps around the cable and closes the opening.

Wiring diagram

i The "N" terminal of the CD25000 should be connected directly to the star point of the transformer so that the connection between NGR and star point is also monitored.

A direct connection between the "N" connections of the CD25000 and the NGR is not recommended, as in this case a line interruption between the star point and the NGR connection "N" would not be monitored.

Wiring diagram (left), CD25000 internal wiring diagram (right)

Notes on the wiring diagram:

Terminal/ Connection	Use	Connecting cable	
		Metrical	Imperial
N	Connection to the star point of the HRG system; permanently connected cable (1.8 m), cable lug provided by the customer	0.36 mm ²	
R _s	Connection to RS of the NGRM. . .	1.5 mm ²	AWG16
E	Connection to E of the NGRM. . . ; Internally connected to PE	1.5 mm ²	AWG16
PE	Connection to the protective conductor, internally connected to E, M5 cable lug	≥ 1.5 mm ²	AWG16 or greater

Commissioning

After connecting the CD25000 to the NGR monitor, perform a field calibration.

i To obtain the best possible results in a field calibration, the NGR monitor should be in operation for at least one hour in the operational environment.
